WARNING

This document contains information affecting the national defense of the United States, within the meaning of Title 18, sections 793 and 794, of the U.S. Code, as amended. Its transmission or revelation of its contents to or receipt by an unauthorized person is prohibited by law.

INTRODUCTION

This report is designed to present a comprehensive study of the coastal defense sites in North Vietnam. Inasmuch as photography is the prime source of information, only those sites which have been validated by photography will be included in this report. As new sites are identified, or as significant changes occur in previously reported sites, periodic supplements will be disseminated to maintain a current data base on North Vietnamese CD sites.

It is not the intent of this report to keep the occupancy status current; therefore, occupancy of a site will be noted when the site is first reported, but will not be the subject of subsequent report changes. However, a cable and associated briefing board, as appropriate, will be disseminated by NPIC as site occupancy changes.

The report is organized into sections corresponding to map sheets, AMS Series JOG 1501, and arranged in descending order, north to south. Within each section, each site is assigned an arbitrary sequence number for report purposes only. BE numbers are included where applicable. For those installations not now having a BE number/name, a name is assigned utilizing the town name nearest the site, as shown on the appropriate AMS map series L7014. A table of contents and a small-scale plot map are included for each section. In addition, a large-scale plot map, a description, and photograph are provided for each site. The type of photography generally precludes accurate mensuration; therefore, no emplacement dimensions are included.

For the purposes of this report, transportation routes are divided into three classifications: hard-surfaced roads, natural-surfaced roads, and trails. Hard-surfaced are improved roads with a durable surface. Natural-surfaced are routes which have been graded and/or improved with materials indigenous to the local area. Trails are any serviceable routes of lower classification than natural-surfaced roads, to include tracks, footpaths, and beach trails. The majority of the sites can be serviced from the

Gulf of Tonkin, but this is indicated only where a water access is of primary importance.

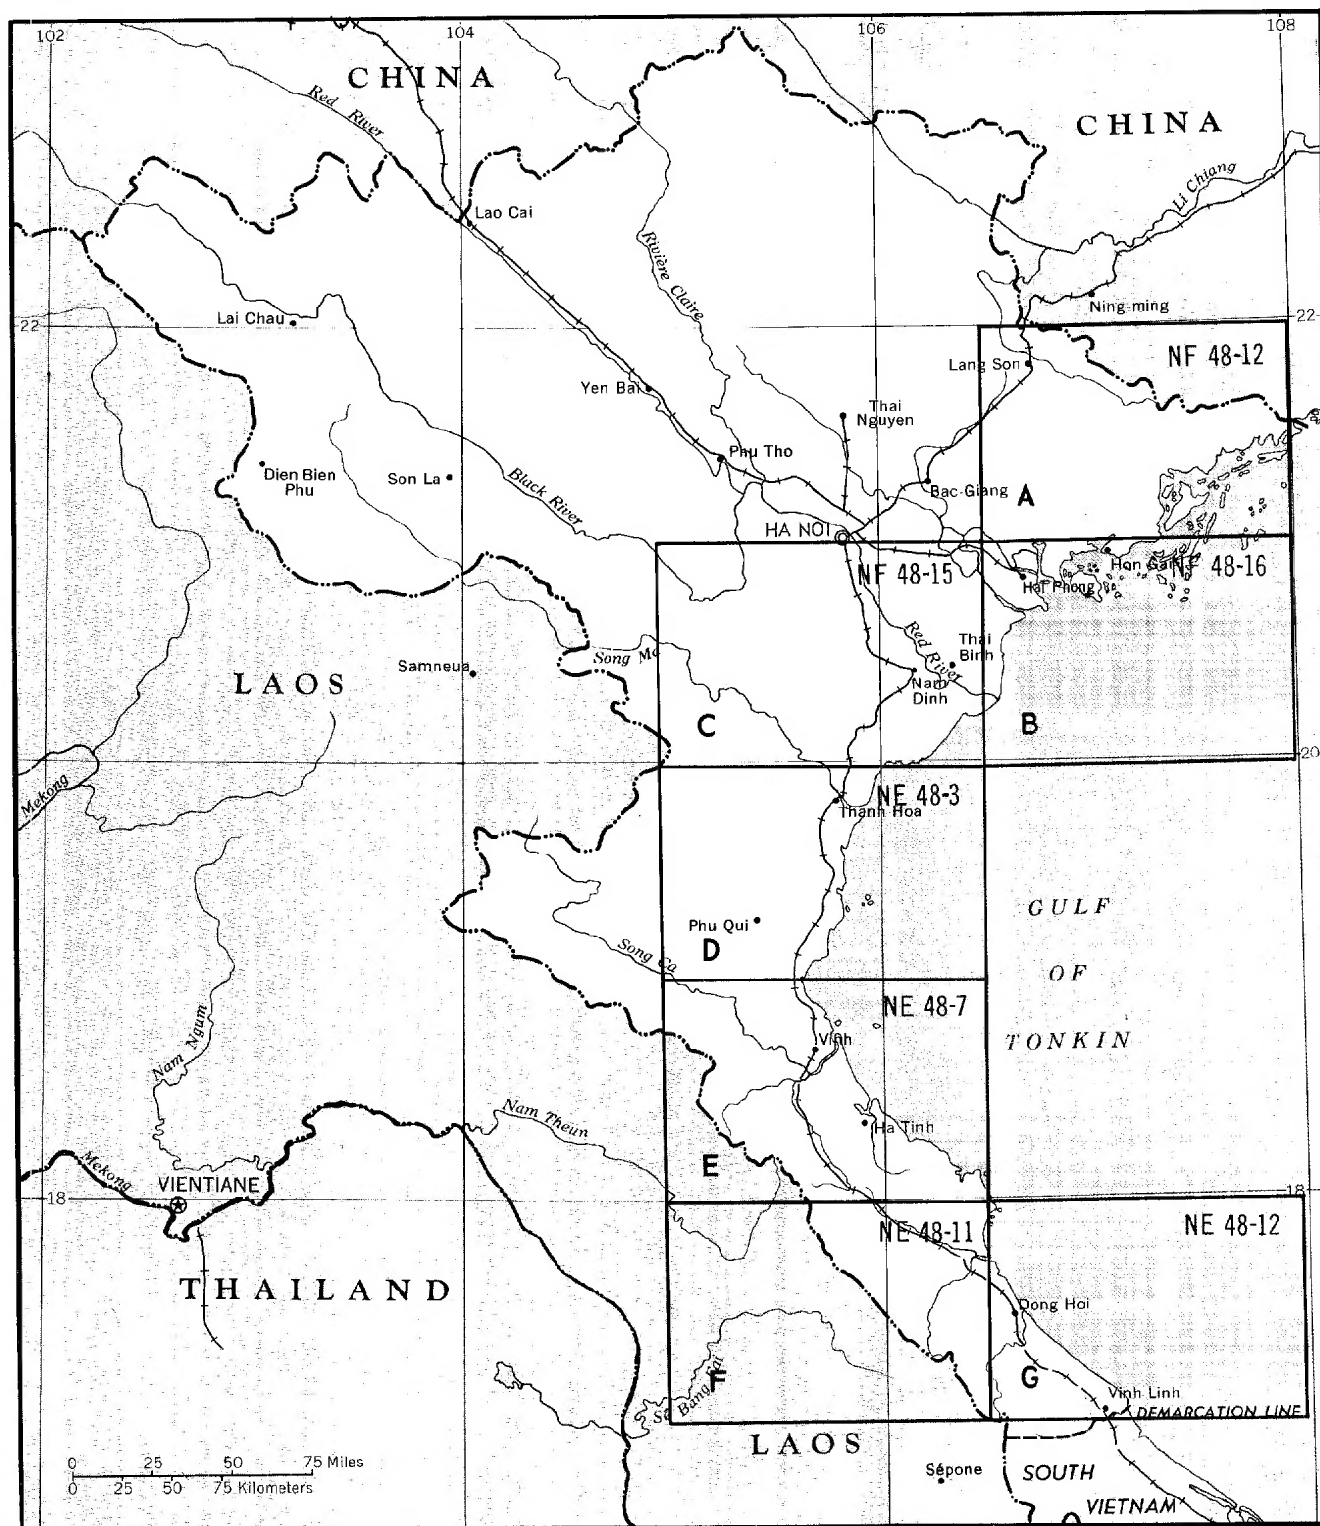

BACKGROUND

The coastal defense sites in North Vietnam can be divided into two categories, permanent and semipermanent. Included in the permanent category are concrete open emplacements, such as those at Do Son (20-42-12N 106-47-30E), and cave-type sites such as those at Cac Ba Island (20-43-36N 107-03-00E).

The open emplacements were probably constructed by the French or Japanese, while the cave-type sites are currently being constructed by the North Vietnamese. These permanent sites are relatively few in number, the majority of sites falling in the semipermanent category. Semipermanent sites consist of open emplacements, sometimes reinforced with additional materials such as pierced steel planking, but not completely hardened. These sites are distributed along all the coastal area, but are more prevalent in areas of level, low lying terrain.

Camouflage has been used, in varying degrees, on all types of sites. The configuration of most sites suggests they are built to be occupied by towed FA pieces, and to date 10 sites have been observed occupied with FA pieces. The only exception noted so far is the Nhu Son site (18-24-12N 105-58-42E), which is occupied with one possible 37/57 AAA gun on a fixed pedestal-type mount. There are some AAA sites along the coast, however only one of the AAA or CD sites appears to be constructed for dual purpose use (Thien Linh 18-36-20N 105-47-42E).

Few of the CD sites have been struck; however, it is anticipated that an effort by the United States to destroy these coastal defense sites may cause the North Vietnamese to utilize less permanent sites and possibly to rely primarily on hastily prepared FA positions along motorable roads serving the coast.
